

Eye Test Practice Instructions

Communication as to the direction in which the letter “E” points is the objective of the short teaching session.

Teach the child that the letter “E” points up – down – right or left.

1. Have your child stand 15 feet from the tester.
2. Cover the right eye.
3. When testing, you may refer to the letter “E” as a table. Ask the child, “Which way do the legs of the table point?” The child should respond by answering – up – down – right or left; or indicate proper direction by pointing.
4. Cover the left eye – repeat test.

This is a practice test – to better prepare your child for the actual vision screening which will be given by the school nurse during registration.
